

Study finds cancer risks in hormone therapy

Using combined estrogen and progestin pills to alleviate menopause symptoms may cause breast cancer and make it harder to detect at an early stage.

-  Participants who took estrogen and progestin
-  Participants who took a placebo

Number of breast cancer cases

	Participants	Cases
	8506	245
	8102	185

Breast cancers that had spread by the time they were diagnosed
